

The updated functionality for adding “NEW” Immunizations now enables VFC providers to enter complete dose information for vaccines given to Non-VFC patients. VFC providers will no longer be required to maintain private (Non-VFC) vaccine inventory in NJIIS.

Click on 'NEW' to enter information for doses administered at your practice.

When entering a new vaccine, you must fill in all required fields (marked with asterisks). If you maintain your inventory in NJIIS you can use the drop down to select a lot number. VFC Inventory MUST be maintained in NJIIS.

If you do not maintain inventory for Non-VFC vaccines in NJIIS, you can now type the lot information into the lot number field (for Non-VFC doses ONLY).

Please discontinue using “Provider History” to document Non-VFC doses administered in NJIIS.

The “NEW” Immunization screen will look different for VFC patients and Non-VFC patients. Please see below for examples.
